Diaci telehandlers

The Dedalus model telehandler, the smallest in Degelman's Diaci-manufactured line, features a maximum capacity of between 2,600 and 3,000 kilograms, and heights of six to seven metres. The Pegasus model, the largest in the line, features 360-degree rotation with maximum lifting capacities of between 3,000 and 4,500 kg, and can reach between 13 and 25 metres. Pegasus machines have options for remote control, and can be used similar to a crane or manlift.

S-60 HC telescopic boom

Genie's S-60 HC telescopic boom is designed for use in a range of markets, and offers a full range of motion up to 750 pounds, as well as a platform load of 1,250 pounds. It also has 40 feet eight inches of outreach, carrying three people and gear.

The S-60 HC is the first Genie model to carry the high-capacity boom option, (which will be made available across the full S-series lineup.) Another recently added option to the Genie line is the Tri-Entry boom platform option, which offers standard mid-rail entries on both ends of the platform, along with the traditional front entry.

Platform hoist system

The Max Climber 3300 Transport Platform Hoist System is designed to provide an easier and safer method for lifting building materials in masonry, scaffolding,

drywall, glazing, restoration and renovation industries. The Max Climber 3300 features heavy duty galvanized mast sections with a payload lifting capacity of up to 3,300 pounds, a single-masted system, and is equipped with a side- and front-loading basket extendable to 165 inches (long) by 59 inches (wide).

842 telescopic handler

The latest from Mustang, the model 842 telescopic handler features a 42-foot lift height (four-story reach) and features a durable boom design, pilot-operated joystick controls, a

tilt cylinder and an optional, patented Work Platform System (WPS).

As an option to the WPS System, a radio remote boom control is available for all Mustang Telehandler models. The radio remote boom control allows a single operator to start or shut down the engine with the remote. The operator can also raise, lower, extend and retract the boom.

TH series handlers

TH210 and TH215 material-handling machines are sized to work productively and cost-effectively in a variety of construction, landscape and agricultural

applications. The TH210 has an operating weight of 12,450 pounds (5,647 kg) and a rated load capacity of 4,850 pounds (2,200 kg). Maximum lift height is 17 feet (5.2 m). The larger TH215 weighs 12,668 pounds (5,746 kg) and carries a 5,500-pound (2,500 kg) load. Its maximum lift height is 18.1 feet (5.5 m). Both machines are compact, with low cab height and small turning radii, for work in tight spaces, and are equipped with an 84-hp (63-kW) Cat 3054B Direct Injection diesel engine.

RT series scissor lifts

Model 6826RT and 6832RT rough terrain scissor lifts feature a manoeuvrable 68-inch wide stance with working heights of 32- and 38 feet respectively. Units come

standard with a powerful dual fuel engine, 4WD, and five-foot roll out extension deck. Also introduced in 2006, SJ 40T and SJ 45T telescopic boom lifts are designed with simplicity and easy serviceability. Units have been given a new look and utilize a Deutz F3L 48-hp engine to power the platform, mounted with a 40- or 45-foot boom (and a five-foot hydraulic jib on the SJ 45T). The turret will rotate 360 degrees and the platform up to 180 degrees. Platform capacity is 600 pounds and 500 pounds respectively.

Serious Engines.
SERIOUS EQUIPMENT.

Serious situations are unavoidable. But thanks to some serious equipment from Subaru Robin, these situations can be managed effectively. Subaru Robin equipment is designed to handle tasks at the most demanding job sites. Whether it's delivering power during an outage or removing wastewater from a flooded area, Subaru Robin provides tough, reliable generators and pumps to meet the challenge. And with a Subaru Robin engine providing the power, each piece of equipment is manufactured as a single unit of superior quality for maximum performance.
